

Caffenol 2

This zine documents my second experiment with Caffenol

Caffenol is a DIY instant-coffee based developer for black and white film.

I used the following formula:

- 1000ml of tap water
- 40g instant coffee
- 56g washing soda
- 16g Vitamin C powder

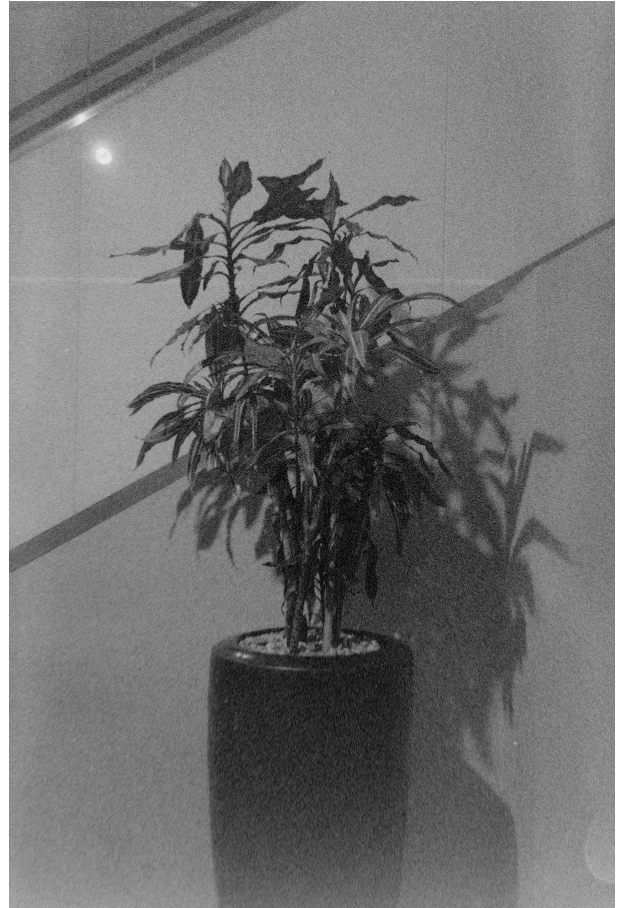

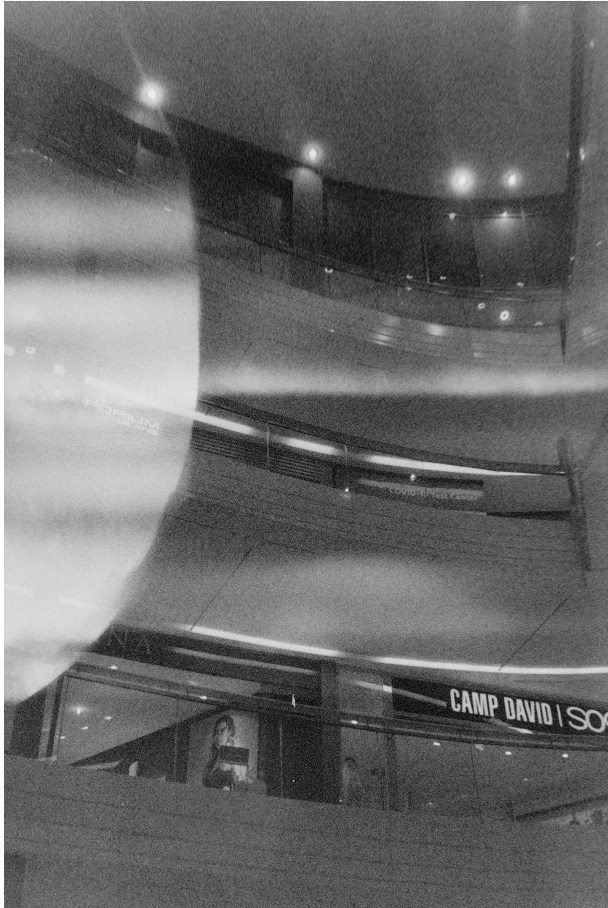

I dissolved all ingredients individually in three cups and then poured them into a water bottle, roughly at 20 degree celsius.

The development was done in a development tank. I kept them in the tank for 15 minutes, rotating every 30 seconds. Afterwards I rinsed the film with water and used Ilford Rapid Fixer.

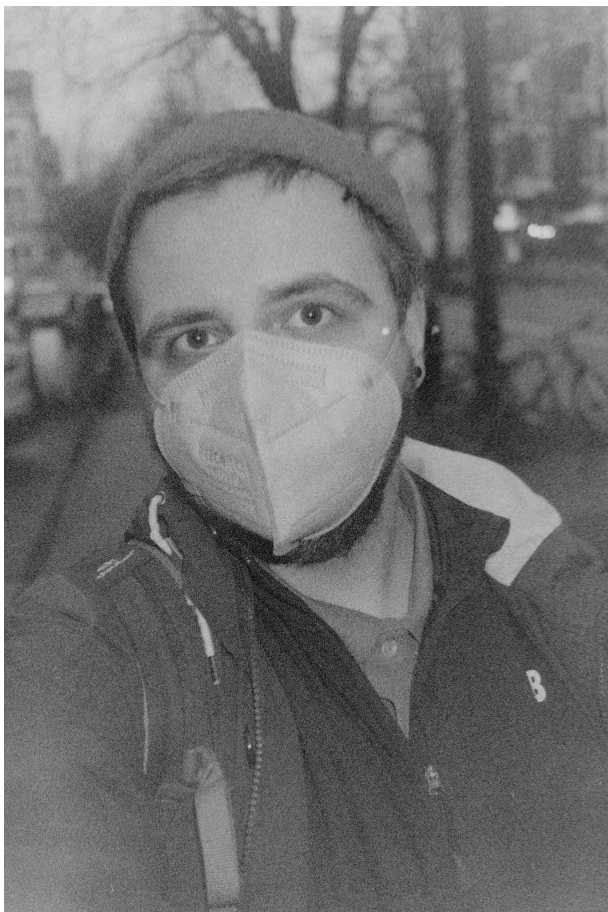

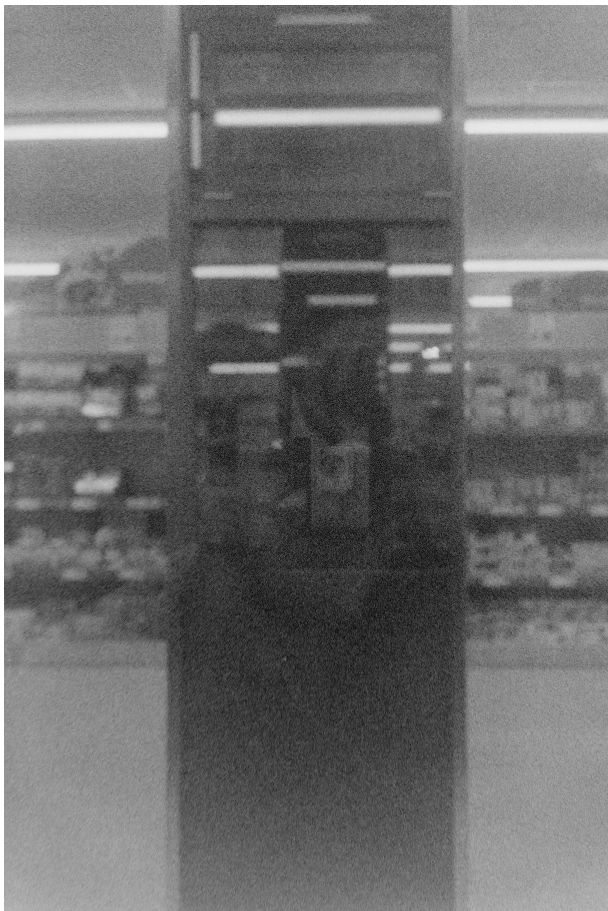

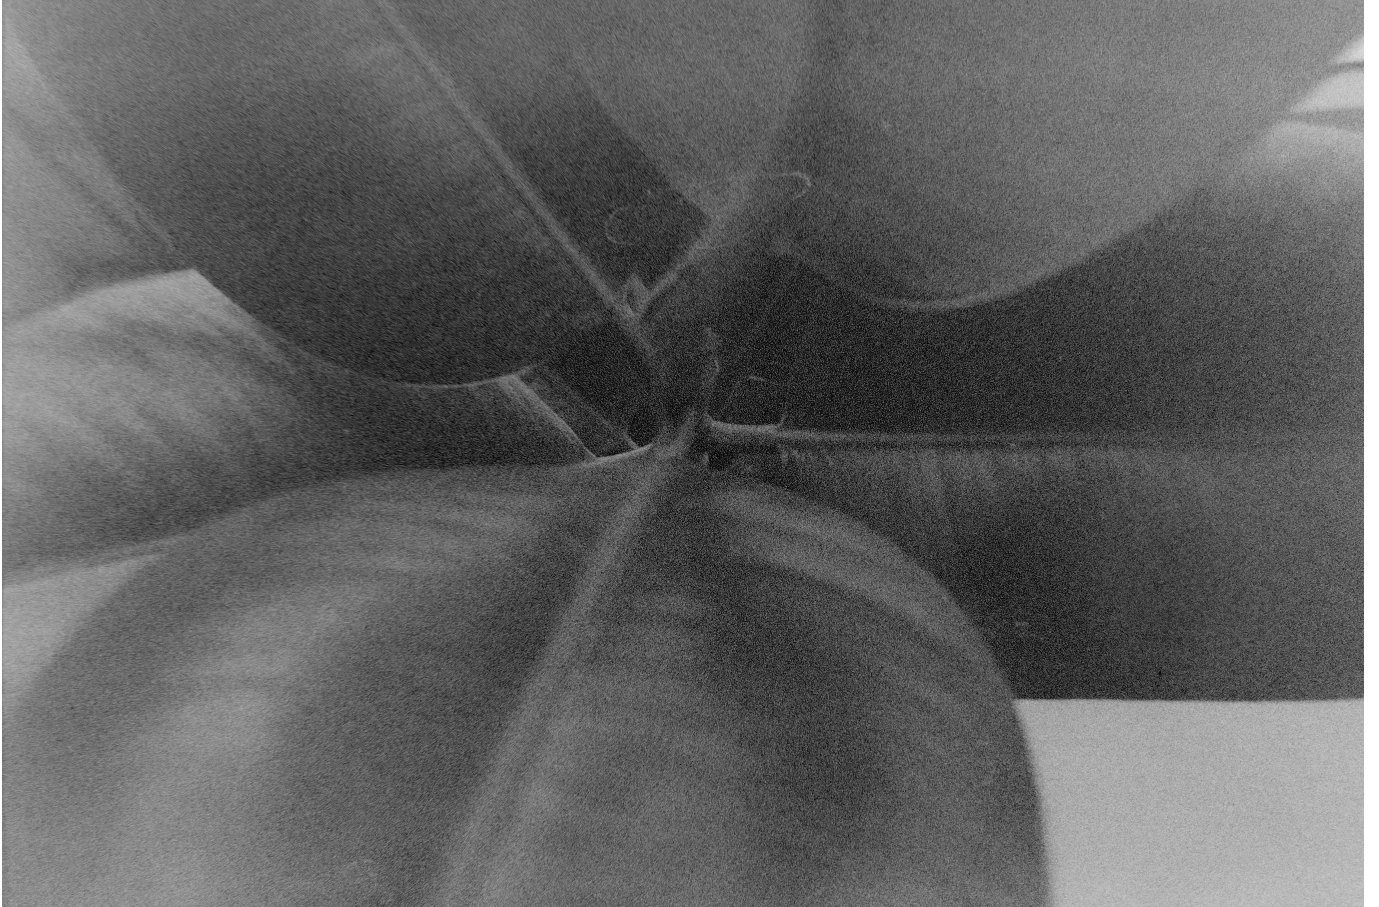

Film: Agfa APX 400
ISO: 400
Camera: Konica Big Mini

Developed in Caffenol

Typeface: Vollkorn
